

Practices

How We Work Day-to-Day

Practices are the disciplined habits and workflows that enable teams to deliver quality software continuously. They bridge the gap between knowing what good code looks like and actually producing it.

What follows are some of the most impactful practices—not an exhaustive list, but a foundation. Many other valuable practices exist, and you'll discover them as you grow. The ones here represent core habits that tend to unlock the most value.

Topics Covered

- **Test-Driven Development (TDD)** - Write tests first, let them guide design
- **Pair Programming** - Two minds, one keyboard, better code
- **DevOps** - Breaking down walls between development, operations, and security
